

Question:

What are the prerequisites for using Enterprise CDM (eCDM)?

How to proceed if the option "Enterprise CDM" is not available in the context menu of the INCA Database Browser, or the option is "greyed out".

Answer:

There are two prerequisites in order to use Enterprise CDM:

1. Prior to using "Enterprise CDM" the INCA add-On "eCDM" has to be installed.
2. Additionally a third party plugin has to be installed, e.g. CRETA (AVL), or vCDM (Vector).

Please check if the vendor Plugin is installed. It can be found in the INCA Installation folder
C:\ETAS\INCA7.x\eCDMSingleAdapterPluginDeploymentDir

If it is not available, please insert the plugin into this folder and check the behaviour again.

Additional information:

Enterprise CDM is an interface that allows INCA/CDM to exchange A2L, HEX, DCM, CVX, PaCo and CDF20 files with an enterprise data storage system such as AVL Creta or Vector vCDM.

The eCDM interface is available in INCA/CDM via the INCA add-on "eCDM". The add-on is free of charge and can be found on the INCA Installation DVD.
